Technologies

SQL, Python, AI/ML, Generative AI

Certifications

- Data Analytics Professional (Coursera) | Jun 2025
- TensorFlow Developer Professional (Coursera) | Aug 2023
- MySQL Basics (Great Learning) | Mar 2023
- Programming Fundamentals (Coursera) | Oct 2022

Summary

B. Tech Computer Science and Engineering graduate (CGPA 9.29/10) passionate about turning data and automation into real-world solutions. Experienced in designing dashboards, building AI-driven applications, and conducting analytical research through academic and self-initiated projects. Open to PAN-India opportunities.

Professional Strengths

Data Analysis & Insight Generation · Maintaining Clear Code & Process Documentation · Developing Agentic Automation Systems · Implementing Web-Scraping Pipelines · Integrating LLMs & APIs for Scalable Solutions

Education

B. Tech – Computer Science and Engineering — Aug 2021 – Aug 2025

MIT World Peace University — ***CGPA:*** 9.29/10

Experience

Generative AI Research Intern, DisruptiveNext — Dec 2024 – Jun 2025

- Scraped web sources using APIs to store results in structured formats for smart analysis.
- Analyzed data exploration and found insights on conversation logs and domain datasets.
- Collaborated with cross-functional teams to help interpret trends and make data-driven decisions.

Tools: AutoGen, Azure Services, Gemini, ScrapeGraphAI, LangChain

Projects

Household Finance App — Sep 2025

- Created email-based OTP verification, to improve protection of the data.
- Designed interactive dashboard to get meaningful insights via graphs.
- Structured routing architecture ensuring coherent context management across different categories.

Tools: PostgreSQL, Python & Flask, HTML & CSS

Smart Rag Webscraper — Aug 2025

- Automated web-scraping using Selenium with intelligent Google search integration.
- Machine learning-based content ranking using semantic embeddings and similarity algorithms.
- AI response engine with local LLM integration and automated source attribution.

Tools: Ollama, Selenium (Python)

Brain Tumor Classification — Aug 2025

- Analyzed MRI image dataset (5,256 scans) across three categories (Glioma, Meningioma, No-Tumor).
- Analyzed and visualized training/validation accuracy and loss curves to assess reliability.
- Documented findings to improve model performance, data quality and future collection strategies.

Tools: TensorFlow, Xception, Inception, CNN
